Internet-Draft	Comodo Group Inc.
Intended status: Standards Track	October 2, 2012
Expires: April 5, 2013	

HTTP Authentication Considerations

draft-hallambaker-httpauth-00

Abstract

This draft is input to the HTTP Working Group discussion of HTTP authentication schemes.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as “work in progress.”

This Internet-Draft will expire on April 5, 2013.

Table of Contents

- 1. What is Wrong in Web Authentication**
 - 1.1. Password Promiscuity**
 - 1.1.1. Password Recovery Schemes**
 - 1.1.2. Password Recovery**
 - 1.2. Provider Lock In**
 - 1.3. Strong Credentials Compromised by Weak Binding**
 - 1.3.1. Confirmation vs Authentication**
- 2. User Authentication is Three Separate Problems**
 - 2.1. Registration**
 - 2.2. Credential Presentation**
 - 2.3. Message Authentication**
- 3. Deployment Approach**
 - 3.1. Password Managers as Transition Path**
 - 3.2. Non-Transferable Credentials**
- 4. Security Considerations**
 - 4.1. Impersonation**
 - 4.2. Credential Disclosure**
 - 4.3. Credential Oracle**

- [4.4. Randomness of Secret Key](#)
- [5. IANA Considerations](#)
- [6. Normative References](#)
- [§ Author's Address](#)
