Filter-Based RIB Data Model
draft-hares-i2rs-fb-rib-data-model-01

Abstract

This document defines a data model for the I2RS Filter-based Routing Information Base (RIB) Yang data model. A routing system uses the Filter-based RIB to program FIB entries that process incoming packets by matching on multiple fields within the packet and then performing a specified action on it. The FB-RIB can also specify an action to forward the packet according to the FIB entries programmed using the RIBs of its routing instance.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on July 7, 2016.
1. Introduction
The Interface to the Routing System (I2RS)
[I-D.ietf-i2rs-architecture] architecture provides dynamic read and
write access to the information and state within the routing
elements. The I2RS client interacts with the I2RS agent in one or
more network routing systems.

This document provides a yang module for the I2RS filter Based
Routing Information Base (FB-RIB) and describes the I2RS interaction
with routing filters within a routing element. The informational
model for the FB-RIB is in [I-D.kini-i2rs-fb-rib-info-model]
1.1. Definition of I2RS Filter Based RIB

Filter-based routing is a technique used to make packet forwarding decisions based on a filter that is matched to the incoming packets and the specified action. It should be noted that this is distinct from the static routes in the RIB [I-D.ietf-i2rs-rib-info-model] where the routing is destination address based.

A Filter-Based RIB (Routing Information Base) is contained in a routing instance (defined in [I-D.ietf-i2rs-rib-info-model]). It contains a list of filters (match-action conditions), a list of interface the filter-based forwarding operates on. Filter-based RIBs (FB-RIBs) operate only on the interface the FB-RIB are configured on.

A Filter Based RIB uses Event-Condition-Action policy. A Filter-based RIB entry specifies matches on fields in a packet (which may include layer 2 fields, IP header fields, transport or application fields) or size of the packet or interface received on. The matches are contained in an ordered list of filters which contain pairs of match condition-action (aka event-condition-action).

If all matches fail, default action is to forward the packet using FIB entries that were programmed by the Routing Informational Base (RIB) manager described in [I-D.ietf-i2rs-rib-info-model].

Actions in the condition-action pair may impact forwarding or set something in the packet that will impact forwarding. Policy actions are typically applied before applying QoS constraints since policy actions may override QoS constraint.

The Filter-Based RIB resides in ephemeral state as does the I2RS RIB and I2RS topology models.

2. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC2119].

In this document, these words will appear with that interpretation only when in ALL CAPS. Lower case uses of these words are not to be interpreted as carrying RFC-2119 significance.
3. Definitions and Acronyms

CLI

Command Line Interface

FB-RIB

Filter-Based Routing Information Base

FB-Route

The policy rules in the filter-based RIB are prescriptive of the Event-Condition-Action form which is often represented by if Condition then action".

Policy Group

Policy Groups are groups of policy rules. The groups of policy in the basic network policy [I-D.hares-i2rs-bnp-info-model] allow grouping of policy by name. This name allow easier management of customer-based or provider based filters.

RIB IM

RIB Informational Model (RIB IM) [I-D.ietf-i2rs-rib-info-model]

Routing instance

A routing instance, in the context of the FB-FIB is a collection of RIBs, interfaces, and routing parameters. A routing instance creates a logical slice of the router and allows different logical slices; across a set of routers; to communicate with each other.

4. The Top-level Yang structure for the FB-RIB

The Top-level Yang structure for the FB-RIB types is:
module: FB-RIB

fb-rib-types module

  +--rw fib-ribs
      +--rw fb-rib* [rib-name]
          |  +--rw rib-name string
          |  +--rw rib-afi inet:afi
          |  +--rw fb-rib-intf* if:interface-ref
          |  +--rw default-i2rs-rib rt:rt-2rs-rib:name
          |  +--rw fb-rib-status-info
          |      |  +--rw fb-rib-update-ref uint64
          |      |  +--rw instance-using*
          |  +--rw default-i2rs-rib rt:rt-2rs-rib:name
        |  +--rw fb-rib-Group* [name]
        |      |  +--rw name string
        |      |  +--rw order-number uint64
        |      |  +--rw acl-policy
        |          |  +--rw acl-policy* acl:access_lists:access-list-entries
        |          |      |  +--rw eca-policy* bnp-eca:rule-group:name
        |      |      |  +--rw fb-rib-group-order_status
        |      |      |      |  +--rw default-group-order uint16
        |      |      +--rw group-refcnt uint16
        |      +--rw group-installed uint16

Figure 4: FB RIB Type Structure

The Top-level Yang structure for a global FB-RIB types (similar to acl) is:

ietf-fb-rib module

  +--rw ietf-fb-rib
      |  +--rw default-instance-name string
      |  +--rw default-router-id rt:router-id
      |      |  uses fb-ribs

Figure 5: Global FB RIB Yang Structure

The Top-level Yang structure for an instance fb-rib is:
instance-fb-rib-model:
    imports fb-rib-types (fb-rib-t)

    augments rt:logical-network-elements:
        logical-network-element:network-instances:
            network-instance
        uses fb-ribs-t:fb-ribs

Figure 6: Instance FB RIB Yang Structure

6.  IANA Considerations

TBD

7.  Security Considerations

A I2RS RIB is ephemeral data store that will dynamically change traffic paths set by the routing configuration. An I2RS FB-RIB provides dynamic Event-Condition-Action policy that will further change the operation of forwarding by allowing dynamic policy and ephemeral RIBs to alter the traffic paths set by routing configuration. Care must be taken in deployments to use the appropriate security and operational control to make use of the tools the I2RS RIB and I2RS FB-RIB provide.
