Abstract

This draft defines a Management Information Base (MIB) module which contains Textual Conventions to represent commonly used Bidirectional Forwarding Detection (BFD) management information. The intent is that these TEXTUAL CONVENTIONS (TCs) will be imported and used in BFD related MIB modules that would otherwise define their own representations.

Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14, RFC 2119 [RFC2119].

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on May 25, 2014.

Copyright Notice
1. The Internet-Standard Management Framework

For a detailed overview of the documents that describe the current Internet-Standard Management Framework, please refer to section 7 of RFC 3410 [RFC3410].

Managed objects are accessed via a virtual information store, termed the Management Information Base or MIB. MIB objects are generally accessed through the Simple Network Management Protocol (SNMP). Objects in the MIB are defined using the mechanisms defined in the Structure of Management Information (SMI). This memo specifies a MIB module that is compliant to the SMIv2, which is described in STD 58, RFC 2578 [RFC2578], STD 58, RFC 2579 [RFC2579] and STD 58, RFC 2580 [RFC2580].

2. Introduction

This document defines a MIB module which contains Textual Conventions for Bidirectional Forwarding Detection (BFD) protocols. These Textual Conventions should be imported by MIB modules which manage BFD protocols.
Note that names of Textual Conventions defined in this document are prefixed with "IANA" to make it obvious to readers that they are IANA maintained.

For an introduction to the concepts of BFD, see [RFC5880], [RFC5881] and [RFC5883].

3. BFD Textual Conventions MIB Definitions

This MIB module makes references to the following documents: [RFC2578], [RFC2579], [RFC5880], [RFC5881] and [RFC5883].

   keyedMD5(2),
   meticulousKeyedMD5(3),
   keyedSHA1(4),
   meticulousKeyedSHA1(5)
}
IANAbfdSessAuthenticationKeyTC ::= TEXTUAL-CONVENTION
DISPLAY-HINT             "1x "
STATUS                        current
DESCRIPTION
"BFD authentication key type.

An IANAbfdSessAuthenticationKeyTC is always interpreted within the context of an IANAbfdSessAuthenticationTypeTC value. Every usage of the IANAbfdSessAuthenticationTypeTC textual convention is required to specify the IANAbfdSessAuthenticationKeyTC object that provides the context. It is suggested that the IANAbfdSessAuthenticationKeyTC object be logically registered before the object(s) that use the IANAbfdSessAuthenticationKeyTC textual convention, if they appear in the same logical row.

The value of a IANAbfdSessAuthenticationKeyTC must always be consistent with the value of the associated IANAbfdSessAuthenticationTypeTC object. Attempts to set a IANAbfdSessAuthenticationKeyTC object to a value inconsistent with the associated IANAbfdSessAuthenticationTypeTC must fail with an inconsistentValue error.

The following size constraints for a IANAbfdSessAuthenticationKeyTC object are defined for the associated IANAbfdSessAuthenticationTypeTC values show below:

noAuthentication(-1): SIZE(0)
reserved(0): SIZE(0)
simplePassword(1): SIZE(1..16)
keyedMD5(2): SIZE(16)
meticulousKeyedMD5(3): SIZE(16)
keyedSHA1(4): SIZE(20)
meticulousKeyedSHA1(5): SIZE(20)

When this textual convention is used as the syntax of an index object, there may be issues with the limit of 128 sub-identifiers specified in SMiV2, STD 58. In this case, the object definition MUST include a 'SIZE' clause to limit the number of potential instance sub-identifiers; otherwise the applicable constraints MUST be stated in the appropriate conceptual row DESCRIPTION clauses, or in the surrounding documentation if there is no single DESCRIPTION clause that is appropriate."

"RFC5880, Sections 4.2 - 4.4"
SYNTAX OCTET STRING(SIZE(0..252))
4. Security Considerations

This module does not define any management objects. Instead, it defines a set of textual conventions which may be used by other BFD MIB modules to define management objects.

Meaningful security considerations can only be written in the MIB modules that define management objects. Therefore, this document has no impact on the security of the Internet.

5. IANA Considerations

This document provides the base definition of the IANA-BFD-TC-STD-MIB module. This MIB module is under the direct control of IANA. Please see the most updated version of this MIB at <http://www.iana.org/assignments/bfdtc-mib>. [RFC-Editor’s Note (to be removed prior to publication): the IANA is requested to create page pointed to by URL.]

This MIB makes reference to the following documents: [RFC2578], [RFC2579], [RFC5880], [RFC5881] and [RFC5883].

IANA assigned an OID to the IANA-BFD-TC-STD-MIB module specified in this document as { mib-2 XXX }. [RFC-Editor’s Note (to be removed prior to publication): the IANA is requested to assign a value for "XXX" under the ’mib-2’ subtree and to record the assignment in the SMI Numbers registry. When the assignment has been made, the RFC Editor is asked to replace "XXX" (here and in the MIB module) with the assigned value and to remove this note.]

6. Acknowledgments

Authors would like to thank David Ward and Jeffrey Haas for their comments and suggestions.
